## SUMMARY

Building data pipelines, integrations, and monitoring on Google Cloud for a platform serving multiple clients, and now contributing to hardening its authentication. Bringing three years of Technical Account Manager at Yardi Systems, owning about 20 client accounts from migration through ongoing support.

## EDUCATION

**M.S. Computer Science (AI/ML Concentration) | San Francisco Bay University** *Bay Area, USA | GPA 3.63*

**Master of Business Administration | University Canada West** *Vancouver, Canada*

**Business Administration | American University of Iraq, Sulaimani (AUIS)** *Sulaimani, Iraq*

## TECHNICAL SKILLS

- Languages: Python, SQL, TypeScript; Backend & Data: FastAPI, PostgreSQL, BigQuery, REST APIs, GCP
- Cloud (BigQuery, Cloud Logging & Monitoring), Docker, Linux/Bash, CI/CD, AWS, Git
- AI & ML: PyTorch, computer vision, model evaluation design, LLM integration, local and quantized inference (Ollama)

## PROFESSIONAL EXPERIENCE

**Forward Deployed / Backend Engineer | Xylo AI Studios** *San Francisco Bay Area, CA | June 2026 – Present*

- Top contributor to the ingestion service (83 of 154 commits). Built credential validation for 5 providers and wrote 18 backward-compatible migrations.
- Built a daily transcript-coverage monitor (Cloud Run, BigQuery) for 4 clients. It replaced outages found by chance after 16–21 days, and its gate excluded 39% of apparent misses as false.
- Rebuilt Google Meet capture after a 16-day silent outage. Restored capture for 2 clients and recovered 25 lost transcripts.
- Hardened a Java/Spring OAuth2 identity service: closed a cross-tenant gap, enforced role checks, encrypted its session store. Moved all 16 machine clients to its new token endpoint with 0 canary failures.
- Added integration tests (Postgres, Alembic) that caught 13 PRs before merge. Code-caused dev-deploy test failures fell from 25 to 0 (4 months before vs. after).

**Software Engineer Intern | FiPet** *San Francisco Bay Area, CA | Feb 2026 – June 2026*

- Shipped production features (friend connections) in TypeScript against evolving product requirements, validating each change end to end across environments before opening a pull request.

**Technical Account Manager | Yardi Systems Inc.** *Toronto, Canada | Jul 2022 – Aug 2025*

- Owned end-to-end delivery for roughly 20 enterprise real estate clients — discovery, solution design, configuration, data conversion and go-live — on Yardi's SaaS platform.
- Translated ambiguous requirements and 30+ bug and enhancement requests into specifications developers could act on, then validated delivered functionality against real customer workflows.
- Drove adoption of complex modules through technical enablement — diagnosing application and data-layer errors in live customer environments, and training users to self-sufficiency.

**Data Analyst | LimeWare (Amazon E-Commerce)** *Toronto, Canada | Jul 2020 – Jul 2022*

- Technical solutions & Market Intelligence: conducted comprehensive analysis using data-driven tools; navigated Amazon Seller Central's technical infrastructure to resolve complex catalog issues and brand registry hurdles.

## RESEARCH & TECHNICAL PROJECTS

**ProofShape — Defect-Aware 3D Inspection** |Co-authored the OpenAPI 3.1 service contract, with tests enforcing that unobserved regions can never yield a Pass.

**Relational Reasoning in VLM Across a Compute Spectrum** | Research; preprint: https://doi.org/10.5281/zenodo.23117197

**TruPhoto — Three-Class Image Authenticity Classification** |Research:preprint in preparation

**Insurance Renewal-Prep Prototype** | Screening project: Built a Streamlit + Gemini LLM tool for commercial insurance renewal prep; selected 1 of 2 from ~450 applicants.
